ALERION: start of production of Pontenure solar plant

Alerion informs that the solar plant of Pontenure (Piacenza) has started production. The plant is installed on the roof of the new logistic center of Upim and is one of the biggest solar plants on roof of South Europe, with a consolidated power capacity of 2.8 MW and a total surface of approximately 60,000 square meters. The plant will have a production of approximately 3.1 GWh/year and will save atmospheric emissions of approximately 1,800 tons of CO₂ a year.

With Pontenure plant, the solar plants of the Group currently operating are four, with a consolidated power capacity of 5.9 MW. Wind farms currently operating are six, with a consolidated power capacity of 123 MW. Total consolidated capacity of plants currently under construction is approximately 102.9 MW: 81 MW in wind sector, 16.9 MW in solar sector and 5 MW in biomass sector.
